## Wascana Creek Crossing

### Pipeline

Associated Engineering plans a redesign for the City of Regina Cast Iron Watermain replacement. The redesign includes designing a horizontal directional drill approximately 2 m west of the existing cast iron pipe and replacing with a new 500 ml poly pipe for potable water. The new pipeline will parallel the existing pipe. The new pipe will be at a depth between 2.7

m to 3 m. The pipeline will be tied into a new poly line system. Once installed and in operation, the existing cast iron pipe will be decommissioned utilizing bentonite and capped and both ends.
